

~~703400~~

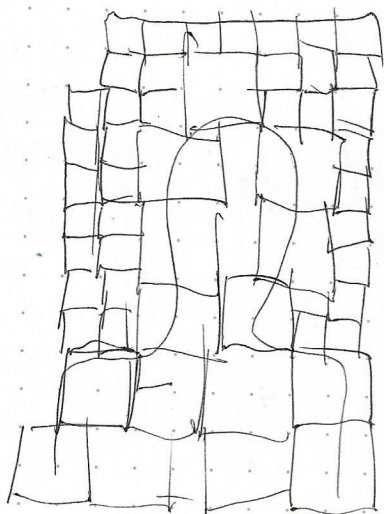

size  
of  
each  
pixel

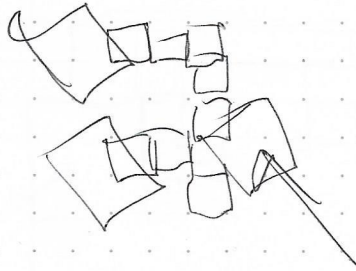

increases  
by luminance/  
brightness

increases from center  
to give it depth

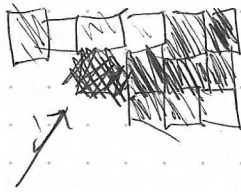

want person to pop  
out

maybe skin tone  
colors pop out?

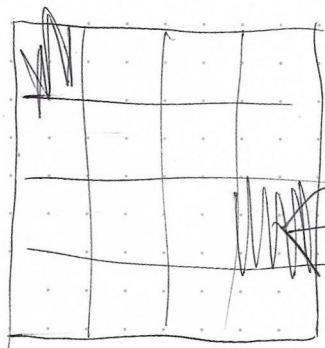

every time  
a pixel is  
"agitated", it's  
value changes by  
enough of a threshold,  
it rotates a  
certain amount

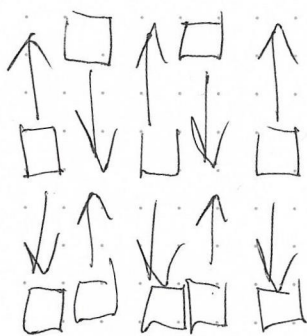

same agitation  
concept, but  
waves of color  
change.

— — — — —  
a feeling  
of moving  
things around  
with your hand

stuck  
pixel

over time, some  
pixels start to  
stick, the mirror  
"breaks" digitally

pixels are constantly  
moving from top to  
bottom - creating a  
weird interlaced  
effect -
